Microsoft or other Development Certifications a Plus

2.

Front End Web Developer

Songtradr, Inc. - Santa Monica, CA

POSITION: Front End Web Developer

Songtradr, Inc.

TITLE: Front End Web Developer

FOCUS: Front end development for a custom music platform

MANAGER: Reports directly to CTO

JOB LOCATION: Los Angeles or Santa Monica, CA

#### RESPONSIBILITIES

Highly proficient in front end development using HTML5, JS and CSS.

Responsive mobile, desktop, and cross-browser design.

Pixel perfect from PSD to page

Good sense of web design and UX/UI.

Knowledge of web standards.

Create specific, detailed and clear documentation for internal and external use.

Development of common components and services to be used across systems.

#### REQUIREMENTS:

Strong familiarity and aptitude with MVC structures, Core MVC6 and C#.

Experience with hands-on coding in HTML5, CSS, JS, jQuery, MongoDB and Bootstrap. Familiarity with Photoshop and min. Visual Studio 2013+.

Proven ability to analyze problems and recommend application of technology for solutions.

Ability to take feedback constructively from multiple stakeholders.

Experience moving your projects through an agile development process.

Wireframe and prototyping experience.

Ability to consistently deliver results and hit deadlines.

Strong communication and collaboration skills, both oral and written.

Positive attitude and can-do spirit.

3.

Front End Developer

Location: Woodland Hills, CA Department:

Digital Support Type: Full Time Min.

Experience: Mid Level

YOUR ROLE: Email Designer and Developer, who can take the lead on email initiatives for our Client. The role requires someone who is comfortable operating at a fast pace, is detail oriented, driven by results and has a high standard for quality. A passion for email and digital marketing, incredible ecommerce experiences and a can do approach are musts.

Has a strong background in email design with coding experience in support of websites, landing pages and social media platforms.

A strategic thinker and problem solver who can utilize existing email templates, but also continue to evolve our offering and approach based on current trends and industry best practices.

Focused on email, but may also include some development (coding) for various other digital properties, including websites, landing pages, social media, banner ads, and more.

KEY AREAS OF RESPONSIBILITY

Overseeing HTML email/Website/Landing Page development and design, managing the implementation of larger scale design and HTML projects, and playing a central role in elevating the overall effectiveness of the email program through the creation of visually appealing emails and templates for various tours and artists.

Will entail participation in campaign ideation and assisting in the deployment of email campaigns via our email platform as needed.

Develop responsive, cross browser-compatible, performant emails, websites and landing pages

Write reusable, testable, and efficient code

Assist in the design of responsive, cross browser-compatible, performant websites and landing pages

Employ a consistent best-practice approach and provide expertise for creating email templates, testing methodologies and deliverability across all devices and email clients

Integrate user-facing elements developed by back-end developers

Optimize execution of projects based on platform strengths, best practices, client objectives and deadlines provided

Work with internal front end developer; assisting in HTML template testing and modifications, hosting images, adding functionality to templates and updating HTML code as needed

Function as liaison between departments to assess project scope and delegate priorities in order to deliver special email programs in a deadline driven environment

Oversee and manage requests from several departments and work with internal/external partners to deliver specialized email programs

Oversee user acceptance and beta testing of new email marketing communications prior to launch, analyzing customer response and rolling out new products

Participate in campaign ideation and assist in the deployment of email campaigns via our email platform (ESPs like Salesforce Marketing Cloud / Exact Target/Ittearble/Silverpop/Eloqua) as needed.

List upload, campaign set up, data

segmentations and deployment of emails using various ESP (training will be provided)

Test and QA programming to ensure campaign deployment will operate as intended.

Perform online campaign set-ups and segmenting of contacts

Stay current on ESP software and enhancements

#### DESIRABLE COMPETENCIES & SKILLS:

Expert in front-end web languages, primarily HTML/HTML5, CSS3, Javascript and jQuery

Expert in development of responsive HTML/CSS email/template and website/landing page development compatible with various email clients and devices

Proficient using the Adobe Creativity Suite, most specifically Photoshop and Dreamweaver

In depth knowledge of popular JS libraries  
Experience with WordPress and HTML5 banner development is a plus

Ability to work and thrive in fast-paced, high-volume, multi-tasking environment

Experience with email marketing software applications and ESPs

Strong visual skills in producing comps, icons, and other assets

Working knowledge of Microsoft Office programs

Ability to work on multiple projects simultaneously and adjust priorities to meet evolving deadlines

Extreme attention to detail and strong organizational skills

Experience with ESPs and Marketing

Automation Platform is a plus.

IF THIS IS YOU THEN - WHY AREN'T YOU HERE AT KERN BUILDING YOUR CAREER ?

4.

PHP Full Stack Developer

Feedonomics 2 reviews - Woodland Hills, CA

\$70,000 - \$90,000 a year

About you

You are an extremely talented Full Stack Developer.

Building an API, consuming an API, scaling

an API doesn't scare you.

Requirements: BS or higher degree in Computer Science or related technical field, or equivalent practical experience. Familiarity with running web services at scale.

Expertise in designing, analyzing and troubleshooting large-scale distributed systems.

Systematic problem solving approach, coupled with a strong sense of ownership and drive.

Minimum of 3 years programming experience. Applicants must be authorized to work in the U.S.

Technologies you'll be using

Full stack (LAMP):

PHP (2+ years)

Comfortable with APIs as well as writing scalable apps

Strong theoretical understanding of time and memory complexity

MySQL (2+ years)

Comfortable explaining locking mechanisms and analyzing potential bottlenecks.

Linux (2+ years)

Comfortable provisioning and scaling multiple servers. \* Javascript / jQuery / Angular (some experience)

Git (know it like the back of your hand)

5.

Senior Full Stack Developer

Accessory Power - Westlake Village, CA

Accessory Power is a consumer electronics manufacturer dedicated to providing a diverse range of high quality products for over 30 years. With a superb understanding of the market, Accessory Power offers knowledgeable customer solutions, multi-lingual packaging and staff, offices and warehouses in US, Asia, and Europe, and an industry leading 3 Year Warranty on every product.

Consider joining our growing team at Accessory Power. We manufacture and market 4 emerging consumer electronics brands: GOgroove® | ENHANCE® | ReVIVE® | USA Gear® along with a handful of other lines and various accessory products. We're growing and we need your help.

#### Basic Description:

The Senior Software Developer, in coordination with the Art Department, Operations teams, and eCommerce department, designs, creates, and supports our evolving suite of in-house intelligent software tools and web applications all which improve our evolving business operations. A successful candidate will be a critical thinker, a professionally kind collaborator, a results-oriented leader, a full-stack development guru, and a proven problem solver who works well leading teams under pressure with often competing deadlines.

This is an opportunity to help lead and inspire our team at a senior level, apply your advanced .NET C#, SQL/Database, and

web development skills in an Agile and entrepreneurial team environment, and make a difference in our broader organization.

### Job Responsibilities:

Analyze business problems and help to design technical software solutions to those problems.

Help to build custom software applications and web applications which may interact with order systems, customer service systems, inventory systems, and/or shipping systems.

Help to identify and resolve bugs occurring in software and web applications.

Analyze current software solutions and build enhancements to improve those solutions.

Lead, support, and inspire team members around you, all while doing great work yourself.

Coordinate with senior company management on the need for new solutions or the A to Z roll-out of existing initiatives.

### Requirements:

Basic Requirements:

Education: BS or higher in Computer Science or related field of study.

3+ years proven industry experience in C# .NET software development.

A deep desire to resolve complex problems with creative and organized technical solutions.

Deep understanding of software development fundamentals in object-oriented design.

Verifiable ability to lead, inspire, and teach teammates.

Proficiency with cross-browser HTML and CSS programming, JavaScript, JQuery, MVC, WCF, WPF, and WebForms.

Understanding of Microsoft Windows services, web services, SOAP, or XML file exchange.

Proficiency working within and manipulating MS SQL, MySQL, or Firebird databases.

Preferred Qualifications:

Experience with software collaboration, project management, or other digital project management tools.

Extensive experience in and around Git version control.

Experience building complex software systems that have been successfully

delivered to customers.

Extremely organized, have an obsessive attention to detail, and a thirst to multi task.

Knowledge of professional software engineering practices & best practices for the full software development life cycle, including coding standards, code reviews, source control management, build processes, testing, and operations.

Ability to take a project from scoping requirements through actual launch of the project.

Experience in communicating with users, other technical teams, and management to collect requirements, describe software product features, and technical designs.

Intermediate technical skills in PHP and/or Linux server management.

6.

7.

Full Stack Developer (with iOS/SWIFT)

Canvas Collective, Inc. - Los Angeles, CA

Full-time, Contract

Recruiters: Please do not contact.

Candidates: You must live in the greater LOS ANGELES area, and be prepared to meet us in person for an interview.

Now- onto the fun stuff:

If you've read one full-stack developer job description, you've read them all, but here's what you don't know:

Us: We're a recently funded tech startup located in Playa Vista, and looking to add

to our team. We just rolled out our soft launch and are ready to bring our development in-house while we onboard over 600 galleries and museums, gather user feedback, and iterate like a good lean startup should. We're currently four strong- Two digital marketing entrepreneurs, one dude from Sotheby's, and a former LMU valedictorian-turned-digital-social-media-strategist.

Museums? Galleries? Hmmm... So... what's Canvas exactly?

Canvas is... Shazam for art! See a piece of art you like? Take a picture and Canvas recognizes it. You can learn about the artist or the venue, and see other works by them. Art-selfies connect back to the artwork, and everything recognized shows up in an art stream curated to the specific tastes of other users.

We're on the cusp of changing the way the world experiences art.

<http://www.canvasartapp.com>

You: You're an experienced engineer with a command of Javascript, solid knowledge of SWIFT (our MVP is iOS) and PHP (laravel framework), and MySQL. We are looking for someone to join our team at our office in Playa Vista, and you are looking to get in on the floor of a tech startup.

Our current tech stack:

AWS EC2 Instance

Ubuntu with MySQL

PHP/Laravel

Bootstrap for some web components

SWIFT front-end

8.

Full Stack Developer

CoConstruct 4 reviews - United States

\$90,000 - \$135,000 a year

DO YOU LIKE TO SEE YOUR CODE SHIP TO  
PRODUCTION WEEKLY (OR DAILY)?

EVER FRUSTRATED BY WONDERING IF USERS EVEN CARE WHAT YOU'VE CREATED?

DO YOU YEARN TO WORK WITH TEAMMATES THAT SUPPORT (AND HOLD YOU ACCOUNTABLE) FOR WRITING GOOD CODE?

## Role Summary

At CoConstruct, we deliver software that transforms the lives of our users by eliminating the chaos in their days and creating rewarding building experiences for home builders and their clients.

With over 100,000 users and expected 2017 growth of 100%, your contributions on the development team will be key for powering our mission-critical software for thousands of home builders and remodelers around the world and for bringing new features and refinements for the thousands more signing up this year.

As a full-stack developer, you'll be

working on both front-end and back-end code. You may not know all of the technologies we use coming in the door. That's OK, as long as you like to learn fast and have a good mind for the core principles of software development.

You'll be part of a subteam of 2-3 developers working on a particular theme of items at any given time. But, we mix up those teams every few months so you have variety and exposure to both different parts of the system and different teammates.

We manage using a Kanban process. So, there are no endless meetings debating arbitrary story points and trying to settle debates about what's a 5 vs. 8. We also don't do the Thursday-before-the-sprint-is-over late night sessions. We work hard when we're at work. We are self-driven to move the cards through the process quickly, but we usually do it in 45 hours or less a week.

Over the course of a year, you'll spend 75%

+ of your time working on enhancements, brand new features, or new implementations of upgraded existing features using new technology. The remainder (but shrinking) part of the time will involve updates to our legacy ASP.net pages. That time is dwindling as we phase out the older technologies in our stack.

And it's not all about the code. Whether it's a pancake breakfast, a gamer night, a 5k mud obstacle course race, or a happy hour, there's time to enjoy the other people who are on the mission with you.

We're already the #1 rated company in our space, and you can see how much our customers love our system and our people (<http://www.softwareadvice.com/construction/co-construct-profile/#reviews>). We're also on strong financial footing, with 12 years of profitable history and three years running on the Inc. Magazine list of fastest growing privately held companies in the US. But, there's so much more we can do. And that's why we need

you to join our growing team.

## About You

You have...

3+ years of full-time software development experience

Working knowledge of C#, HTML5, CSS, Javascript, JQuery, and SQL. Knockout.js is a bonus. If you don't have a Microsoft background, but have done Java or similar languages, and are fine learning C#, then we're still game to have you on board.

Strong knowledge and experience with object oriented design and coding

Developed both the front- and back-ends of web-based applications

Worked concurrently with at least one other software developer on the same project. We need you to play well with others and not just be a lone wolf coding wizard

Taught yourself new technologies to go from newbie to proficient in short order

Worked on developing new features that have some interaction with legacy code

An innate desire for your code operate  
error-free, with flawless appearance,  
across all supported browsers and devices  
BEFORE you hand it off to QA  
As a full stack software developer, you  
will:

Use requirements and prototypes from the  
product team to develop new features and  
perform some maintenance on existing code  
using C#, ASP.net, SQL, HTML5, CSS,  
Javascript, jQuery, Knockout.js, and third-  
party controls and libraries.

Be responsible for developing solid  
architecture for your features, justifying  
alternatives, and getting signoff from your  
peers

Identify and address ripple effects from  
your changes in other parts of the  
application

Perform code reviews

Code for performance and maintainability

Follow (and help shape) team coding  
standards, including using comments well to  
pay it forward for teammates who will later  
maintain your code

Proactively raise relevant questions about requirements and approaches

Seek new ways to improve your methods and skill set

Be proactive in your approach to problem identification and resolution

We are excited about what the right person in this role will accomplish, and we want you to be excited about the journey ahead. That's why we have explicit goals already in place for the initial months of this position, so you know exactly what's expected:

30 days

Completed and passed CoConstruct system quiz

Completed at least 3 user stories, with some assistance from your teammates

75%+ adherence to documented coding standards\*60 days\*

Independently completed at least 5 user stories

90%+ adherence to documented coding standards

Able to independently execute all aspects of the development, deploy, and monitoring processes to test environments\*90 days\*

Completed at least 5 back-end and 5 front-end user stories\*Benefits: \*

Salary of \$90-145k, based on experience

Retirement plan with employer match

Employer covers 100% of health care and dental premiums

Paid time off

Paid holidays

Employer-paid training for relevant skills

New hardware

3 monitors and a standing desk (if you want it)

Some kind of snacks always hanging around

Potential relocation assistance

9.

Senior Web Developer

Development | Woodland Hills, CA, United States

Apply

Send Jobvite

The Sr. Web Developer candidate will work to create rich interfaces, functionality, and web-based applications. This position will help provide technical leadership to their project team, help mentor and train junior developers, help drive feature design and discovery, as well as feature planning and technical design. This position will not just be responsible for writing code, but also to partner with and support Product Management and UX team members in order to ensure features and approaches are well planned, designed, and executed, in order to provide the best possible experience to our clients in the most efficient ways possible. This candidate should excel in all components of the Rich Internet Application development skill set, and be an expert throughout the Front End skillset (JavaScript, HTML4 & 5, CSS2 & 3, site performance and tuning, asset bundling, asset pipelines, templating, and unit testing).

## Responsibilities

Design, build, and enhance the Front End of a large scale and high traffic web application

Develop, design, and maintain simple, intuitive, and feature-rich dynamic interfaces and components, driving for an optimized and responsive experience for our users

Work with Creative and UX departments to ensure user interface consistency, optimization, adherence to established page types and style guides, and driving the interface forward to modern and intuitive user interactions

Mentor junior team members with complex interface design solutions

Monitor, analyze, and improve performance and responsiveness of the web application, and specifically the Front End components and infrastructure

Be a contributing member of a tight-knit and forward thinking team of front end engineers who have fun and work hard, and

hold themselves to very high standards  
Stay current with technology and industry  
best practices, with an eye towards  
applicable use or learnings from those  
technologies that can be leveraged for the  
product, team, environment, or processes  
Qualifications

4+ years as a Lead Developer for UI/Front  
End/RIA projects

5+ years of experience working with and  
developing in large scale, high traffic/  
performance web applications

Expert level experience writing JavaScript,  
CSS2/3, HTML4/5

Expert in site tuning and performance  
optimization (HTTP Profiling, PageSpeed,  
etc.), including asset bundling, and  
minification

Excellent analytical and troubleshooting  
skills

Excellent written and verbal  
communications, with a proven history at  
being able to work and collaborate  
effectively with non-technical team members  
and/or stakeholders

Expert knowledge of cross-browser compatibility issues, browser degradation/progressive enhancement strategies, optimization and accessibility techniques  
Strong knowledge of website analytics and A/B testing tools  
Mobile web application experience is a plus

10.

Web Developer
